

**READ BEFORE VIEWING THE VIDEO FOR THE PP309BZ PETCAM  
NEWLY INSTALLED SECURITY MEASURE**

The demo video begins at the first screen of the configuration screen. However, in order to get to this screen you must register your app with a valid email. When you first download the SRICAM app it will open to a login/register page. This is a security measure so that you are the only one that can authorize the use of this app should you want to reload it or load it on other devices. You're free to use your everyday email and password but Pet-Peeps recommends you simply create a dummy gmail account by going to [google.com](https://www.google.com) and opening a free email account. This is only a suggestion for security of your everyday email but certainly not mandatory.

Pet-Peeps has installed a 3 level security measure into the app so you will be asked to enter that email and password several times before you actually get to the setup page. You'll only have to do this once and has been created to keep all settings and access to your PetCam private.
